

**Position:** Developer Analyst – Algorithmic trading

**Location:** Bangalore

**Educational qualifications:**

Graduate in CS from top-tier engineering college, to have graduated in top quartile of class

**Job description:**

The developer analyst works closely with traders from the principal trading & asset management teams to develop, test and deploy ultra-low-latency algorithmic trading strategies on existing vendor platforms. As part of the algorithmic trading team, analysts will be expected to take active part in fine-tuning existing trading infrastructure and improving efficiency & latency. Ideal candidates are also expected to demonstrate a keen interest in developing independent trading hypotheses for back-testing & deployment, over time.

**Experience:**

- Prior experience not a must, but is desirable
- In-depth understanding of platforms like UNIX, .NET, etc
- Very high level of comfort with programming in C, C++, C# and Java

**Knowledge / Skills / Personal Attributes:**

- Demonstrated high analytical capabilities
- High degree of detail-orientation
- Preference shall be given to candidates with demonstrated data mining capabilities, and ability to work with large databases (statistical modeling & use of MATLAB / R)
- Strong inter-personal skills to work independently in a team environment as well as to lead a team subsequently
